## Content

1. Introduction
2. Basic system configuration
3. Applications
4. Recent developments
5. Conclusions

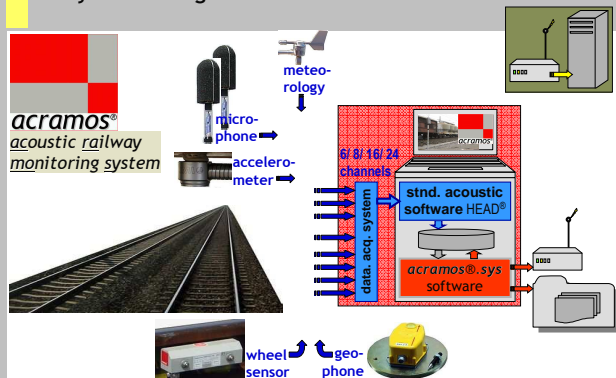

## psiA-Consult Umweltforschung und Engineering GmbH

- Founded in 2000 by Manfred Kalivoda & Monika Bukovnik
  - (former company name was "psiA-Kalivoda Consult" which had been founded in 1995)
- located in Vienna, Austria
- business focus Environmental Research and Consulting
- 8 Employees (full/part-time)
  - 2/2 Engineers
  - 2/1 Technicians
  - 1 Secretary
- Our business principles
  - Environmental engineering must be dealt with in a holistic way including all other relevant like economy, technology and sociology
  - integrative solutions for environmental protection on scientific level

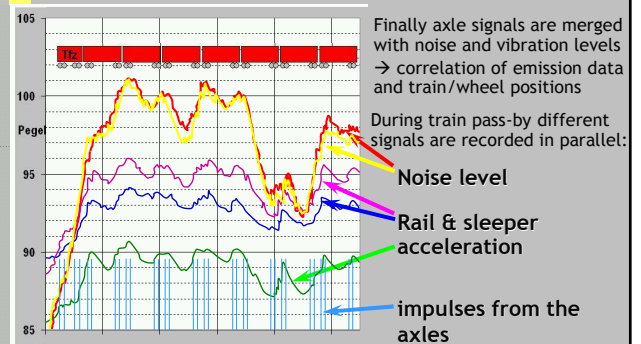

## Fields of activity

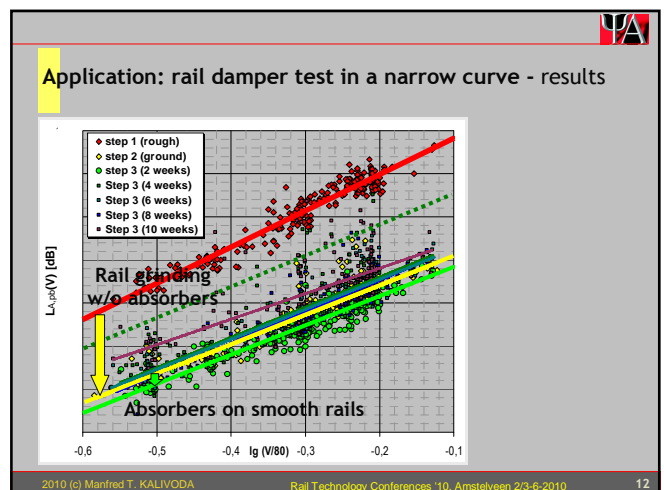

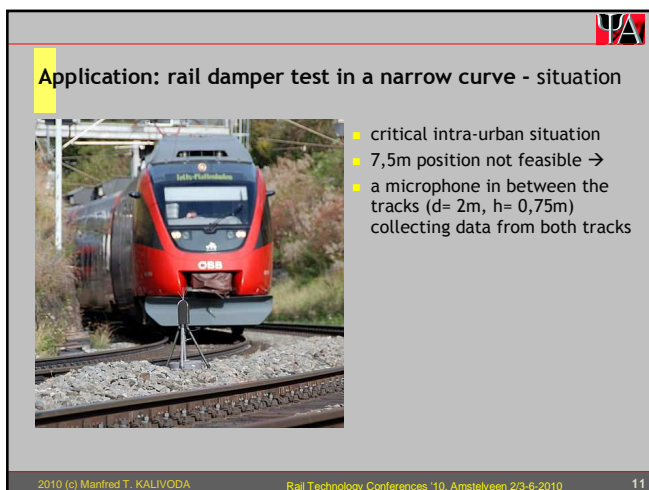

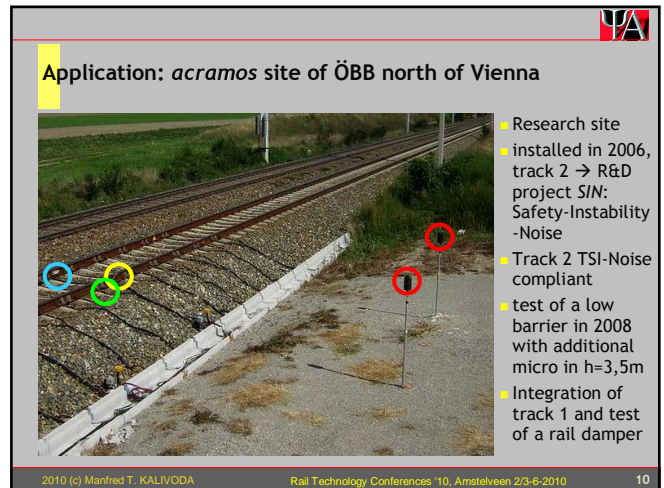

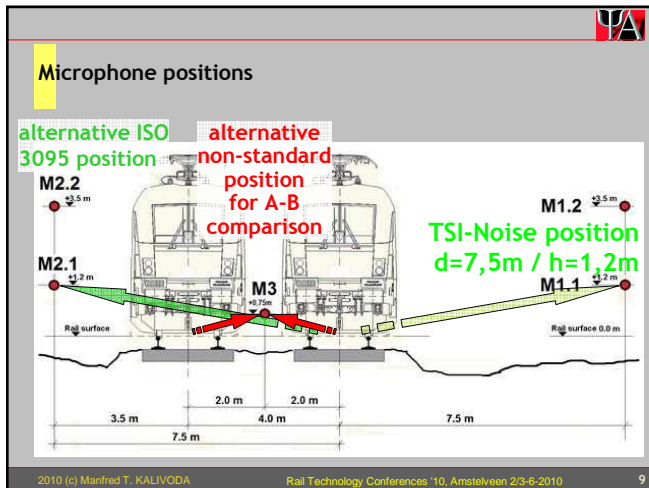

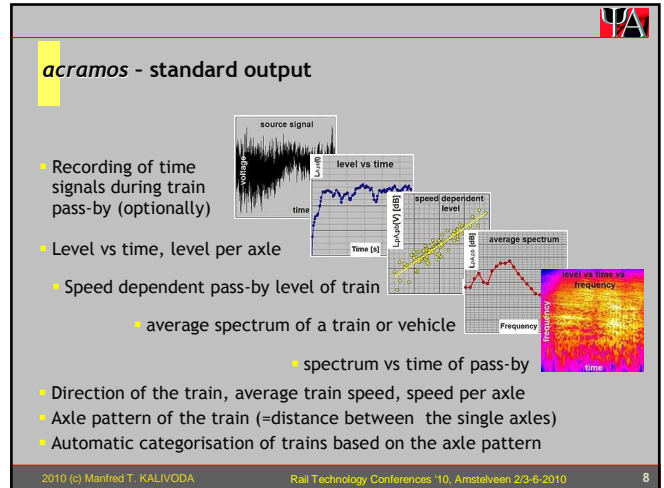

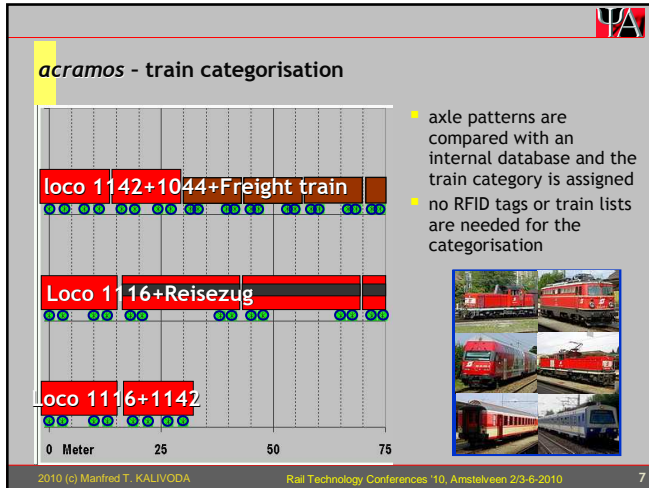

## Basic system configuration

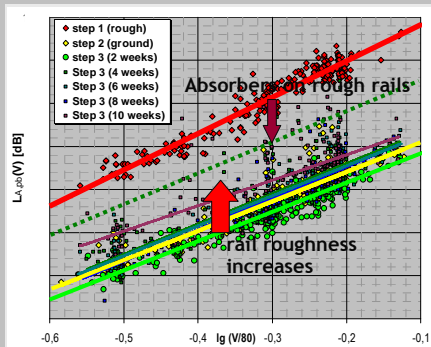

## acramos - data acquisition & processing

### Application: rail damper test in a narrow curve - results

- Only monitoring over several weeks was able to distinguish between acoustic effects from
  - rising rail roughness and
  - Rail dampers

2010 (c) Manfred T. KALIVODA

Rail Technology Conferences '10, Amstelveen 2/3-6-2010

13

### Application: Comparison old/new steel bridge - situation

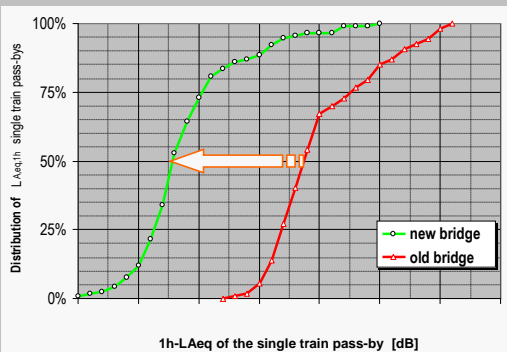

- 2 microphone positions in the "ISO distance" of 7,5m distance
- 3 cases : old bridge - new+w/o barrier - new+with barrier

2010 (c) Manfred T. KALIVODA

Rail Technology Conferences '10, Amstelveen 2/3-6-2010

14

### Comparison old/new steel bridge - results

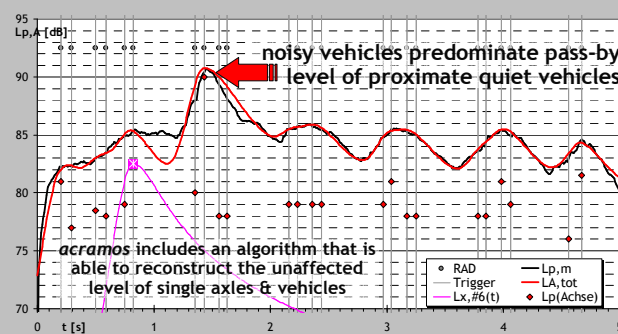

2010 (c) Manfred T. KALIVODA

Rail Technology Conferences '10, Amstelveen 2/3-6-2010

15

### New features - reconstruction of unaffected vehicle level

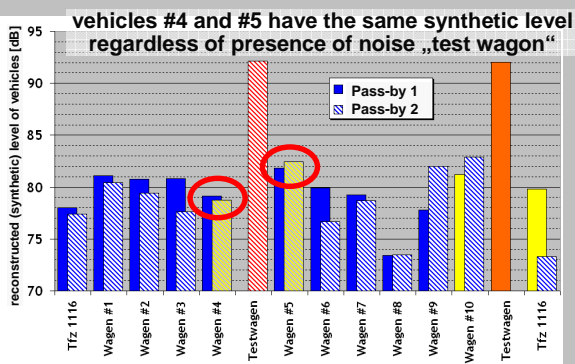

2010 (c) Manfred T. KALIVODA

Rail Technology Conferences '10, Amstelveen 2/3-6-2010

16

### New features - reconstruction of unaffected vehicle level

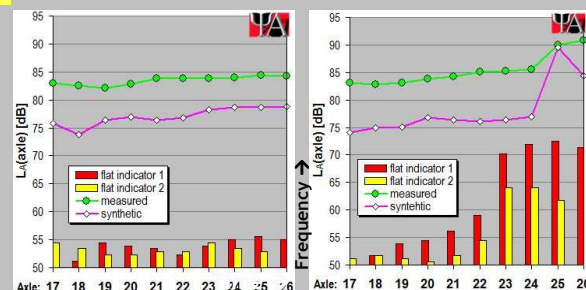

2010 (c) Manfred T. KALIVODA

Rail Technology Conferences '10, Amstelveen 2/3-6-2010

17

### New features - automatic wheel flat detection

2 pass-bys of one and the same vehicle that (accidentally) caught a wheel flat on axle 26 during the tests

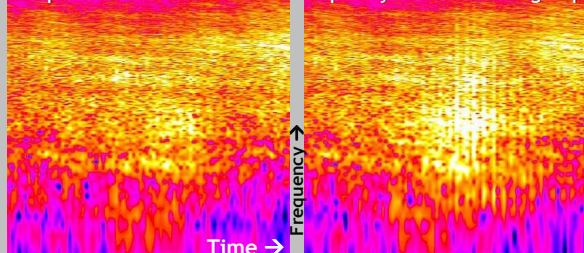

2010 (c) Manfred T. KALIVODA

Rail Technology Conferences '10, Amstelveen 2/3-6-2010

18

## New features - automatic wheel flat detection

Postprocessed level vs time vs frequency of the vehicle group

2 pass-bys of one and the same vehicle that (accidentally) caught a wheel flat on axle 26 during the tests

2010 (c) Manfred T. KALIVODA

Rail Technology Conferences '10, Amstelveen 2/3-6-2010

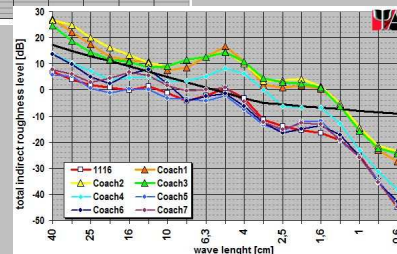

19

## New features - indirect total roughness

TNO offers the PBA-tool which is able to calculate total indirect roughness from rail vibrations

- Data of mixed (disc/ci) passenger trains have been analysed so far
- Results show a good correlation between height of pass-by level and total indirect roughness per vehicle
- PBA implementation in *acramos* considered

2010 (c) Manfred T. KALIVODA

Rail Technology Conferences '10, Amstelveen 2/3-6-2010

20

## Conclusions

*acramos* is a very flexible tool for various purposes

- permanent environmental noise and vibration monitoring of railway operation for
  - identification of "irregularities" like wheel flats → safety issue
  - monitoring of individual vehicles if vehicle identification is available → test run in summer 2010 with RFID equipped wagons
  - data collection for a future (actual) noise related track access charge → reconstruction of unaffected level
- temporal noise and vibration monitoring for
  - assessment of vehicle or track related mitigation measure
  - data collection for noise calculation schemes

2010 (c) Manfred T. KALIVODA

Rail Technology Conferences '10, Amstelveen 2/3-6-2010
